

 Shelter **Name:** “EXAMPLE CAT”

Male / オス

Number of Cats	1 male
D.O.B.:	2015? <= best guess - 3 or 4 years old in 2019/8
FIV Status:	Negative [tested twice, 18 months apart]
FeLV Status:	Negative [tested twice, 18 months apart]
Notes:	DIET: please put him on a diet.
Vaccinated:	to 2019/9/4
Neutered:	Yes 2017/4 [Testicles not dropped so large incision made.]
Microchipped:	Yes [392144000101683]

Medical conditions / notes:

Found with badly infected cut on street 2017/3/12. Original plan was to return as TNR, but treatment/neutering required 6 weeks care with us, after which he was showing signs of having been socialized. [I think he was once a house cat.] He was **very** wary of people - it took a year before he would trust me.

He is now socialized to Nick and Midori - but may be wary of new people and situations until he gets used to them. He is quiet, rarely makes a call, and is affectionate and comes for love. He needs 2 weeks of intensive socialisation from people he does not know, to prepare for rehoming. He is responsive to people - long term, I believe he will be very sociable with guests. He uses his tray, and usually sleeps with 5 other cats on/in my futon. He is a NICE person - a real gentleman.

Neutering: his testicles had not dropped, so a large incision had to be made to locate them. The muscles of his belly are thus possibly weaker than normal.

Fostering period: Initially, 4 weeks from date below - may be extended by agreement of both parties.
